Method notes:

- Shootout attempts excluded (period 5).
- npG = xG excluding in-game penalties (not open-play xG).
- Goals Against scoreboard = 8; opponent shot-goals = 7.
- Own-goal event explicit check: match 3869151, minute 76, Own Goal Against (Enzo Fernandez).

Shotmaps by Match

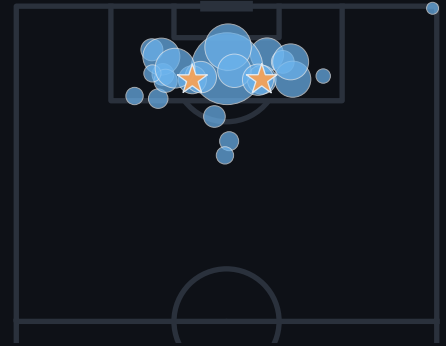

ARG 1-2 Saudi Arabia
xG 2.49 - 0.15

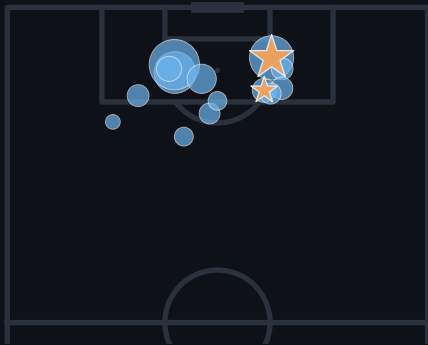

ARG 2-0 Mexico
xG 0.33 - 0.21

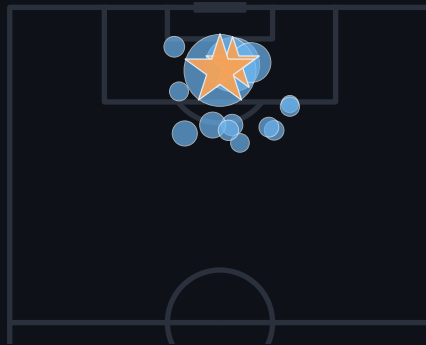

ARG 2-0 Poland
xG 3.08 - 0.20

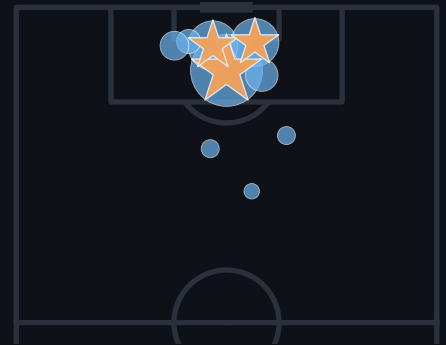

ARG 2-1 Australia
xG 1.48 - 0.43

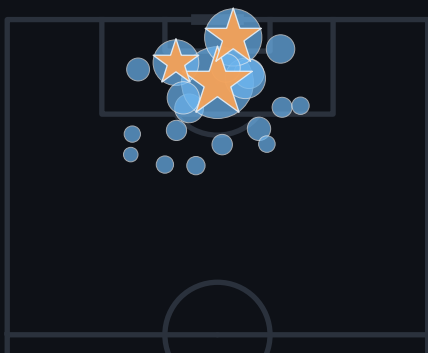

ARG 2-2 Netherlands
xG 1.94 - 0.57

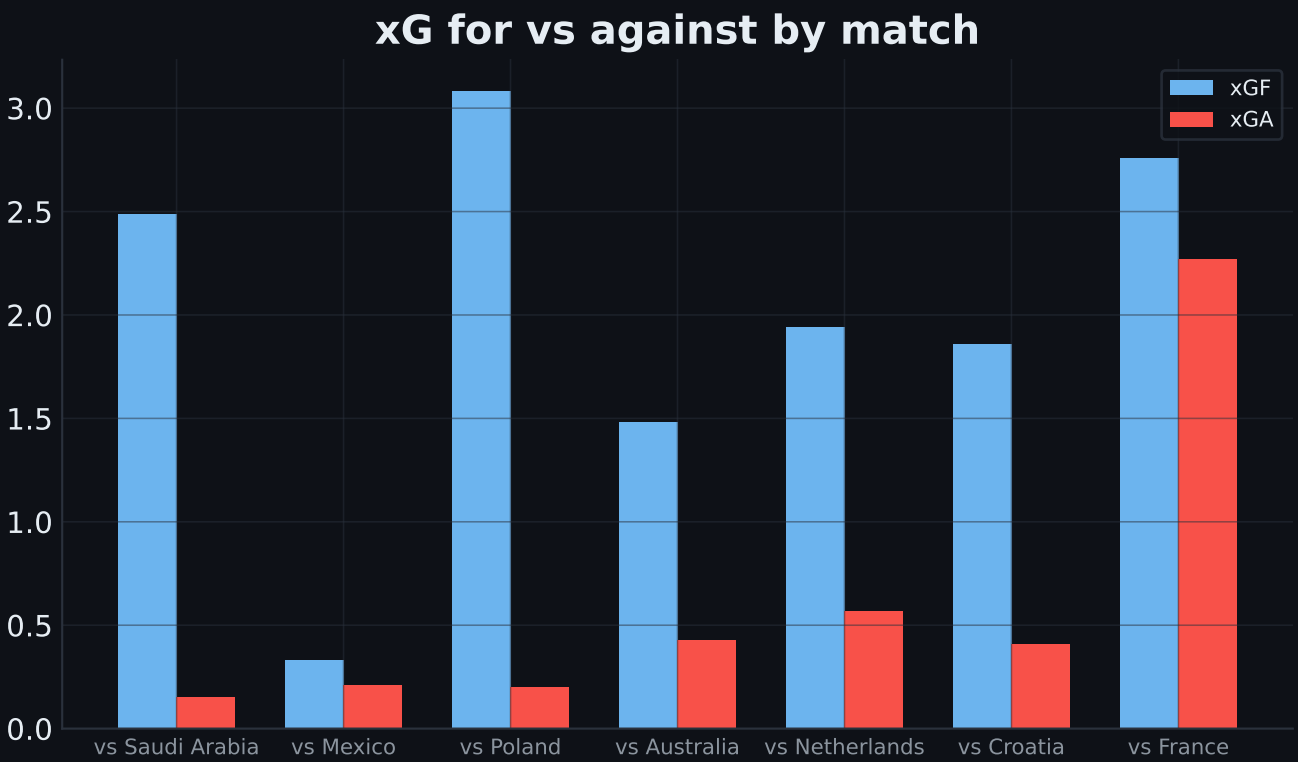

ARG 3-0 Croatia
xG 1.86 - 0.41

ARG 3-3 France
xG 2.76 - 2.27

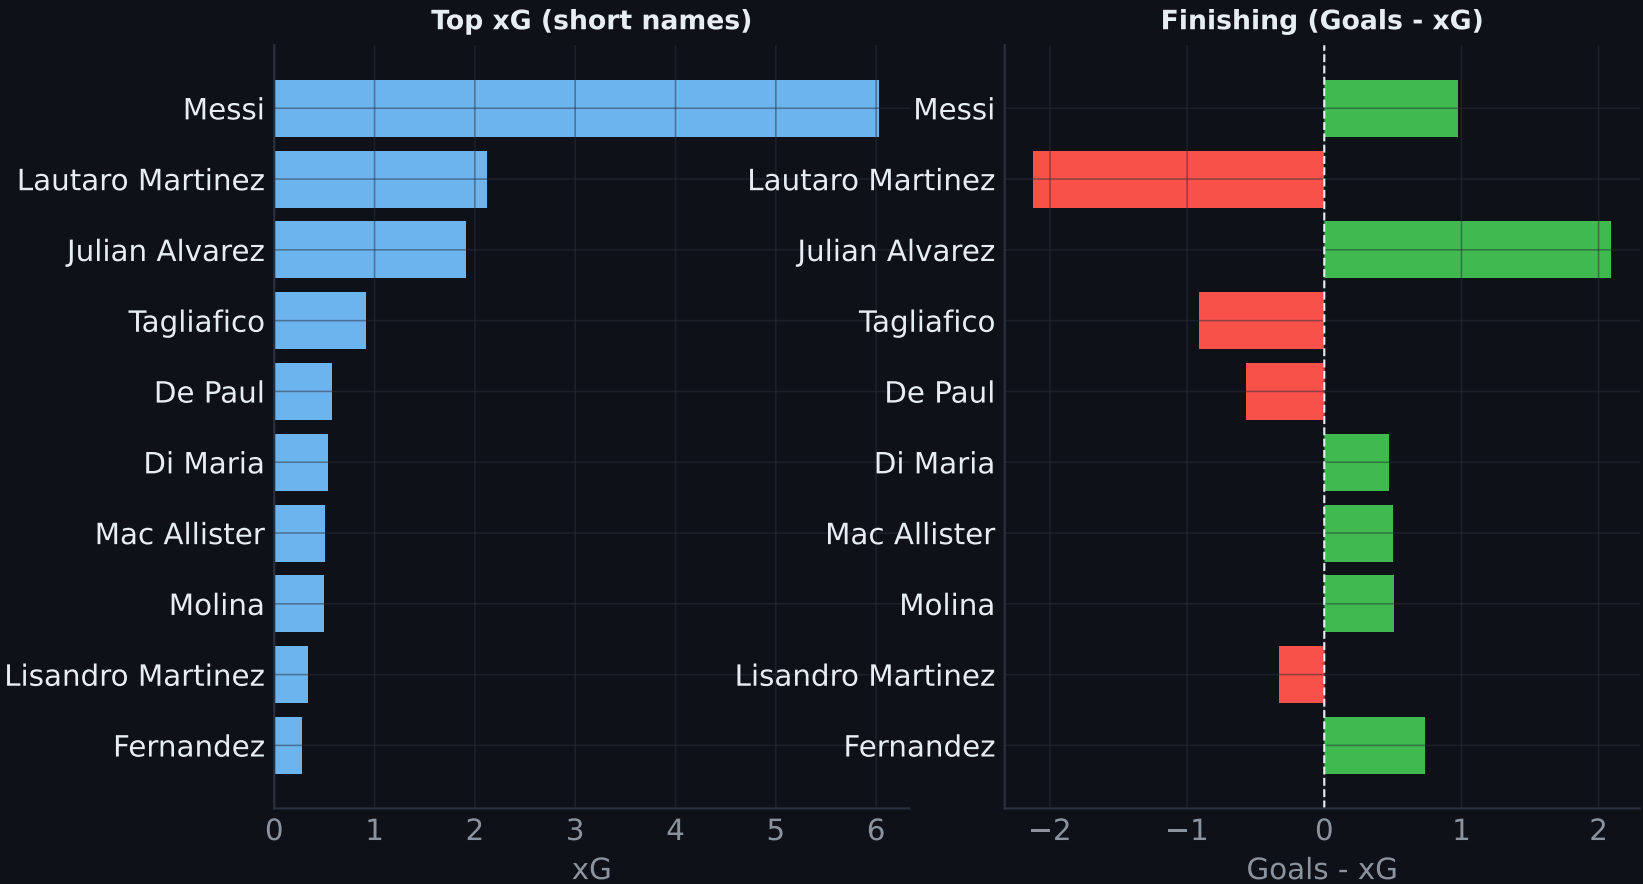

Match outcomes and chance quality

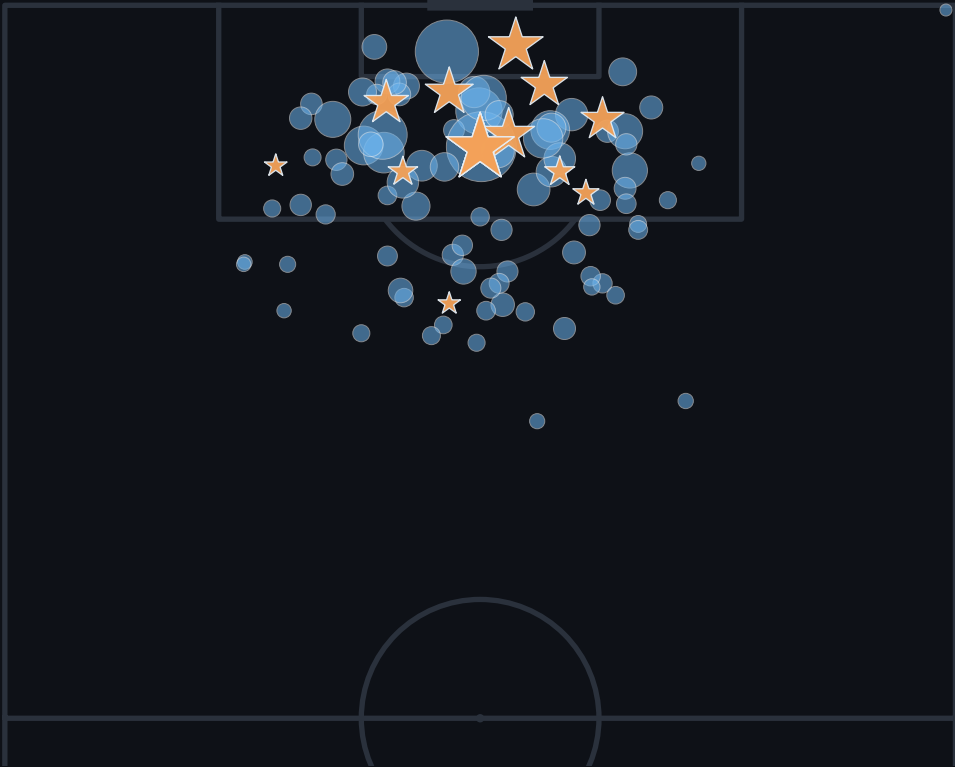

Stage	Opponent	GF	GA	xGF	xGA	xG_diff	ShotsF	ShotsA
Group Stage	Saudi Arabia	1	2	2.49	0.15	2.34	15	3
Group Stage	Mexico	2	0	0.33	0.21	0.12	5	4
Group Stage	Poland	2	0	3.08	0.2	2.88	24	4
Round of 16	Australia	2	1	1.48	0.43	1.06	14	5
Quarter-finals	Netherlands	2	2	1.94	0.57	1.37	14	7
Semi-finals	Croatia	3	0	1.86	0.41	1.45	9	12
Final	France	3	3	2.76	2.27	0.49	20	10

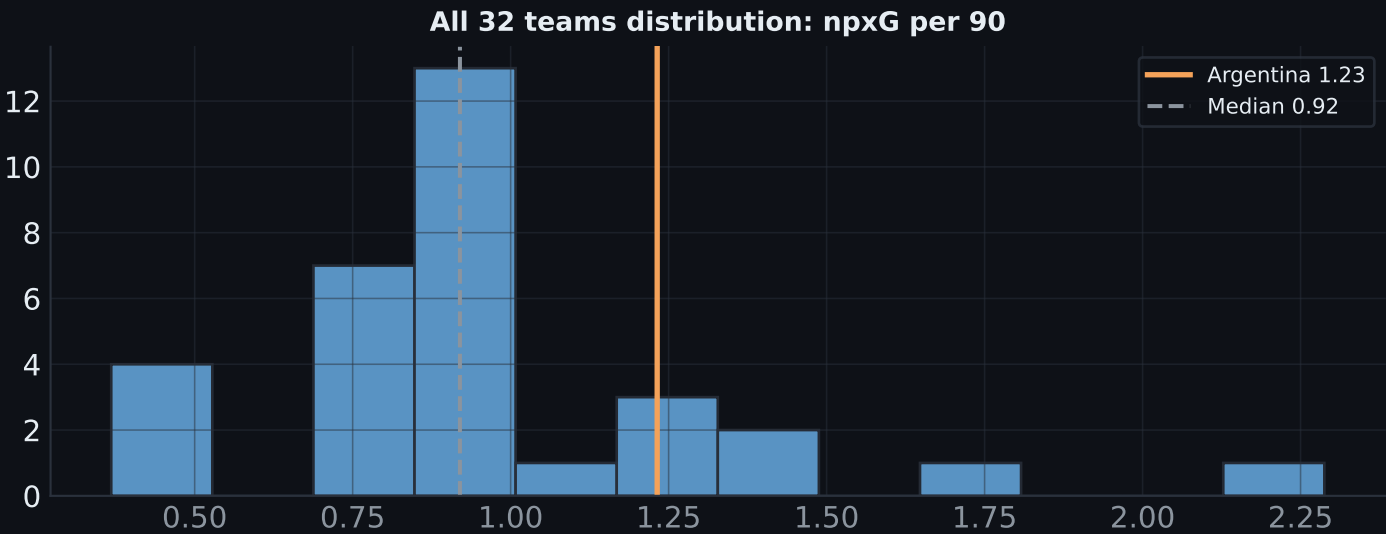

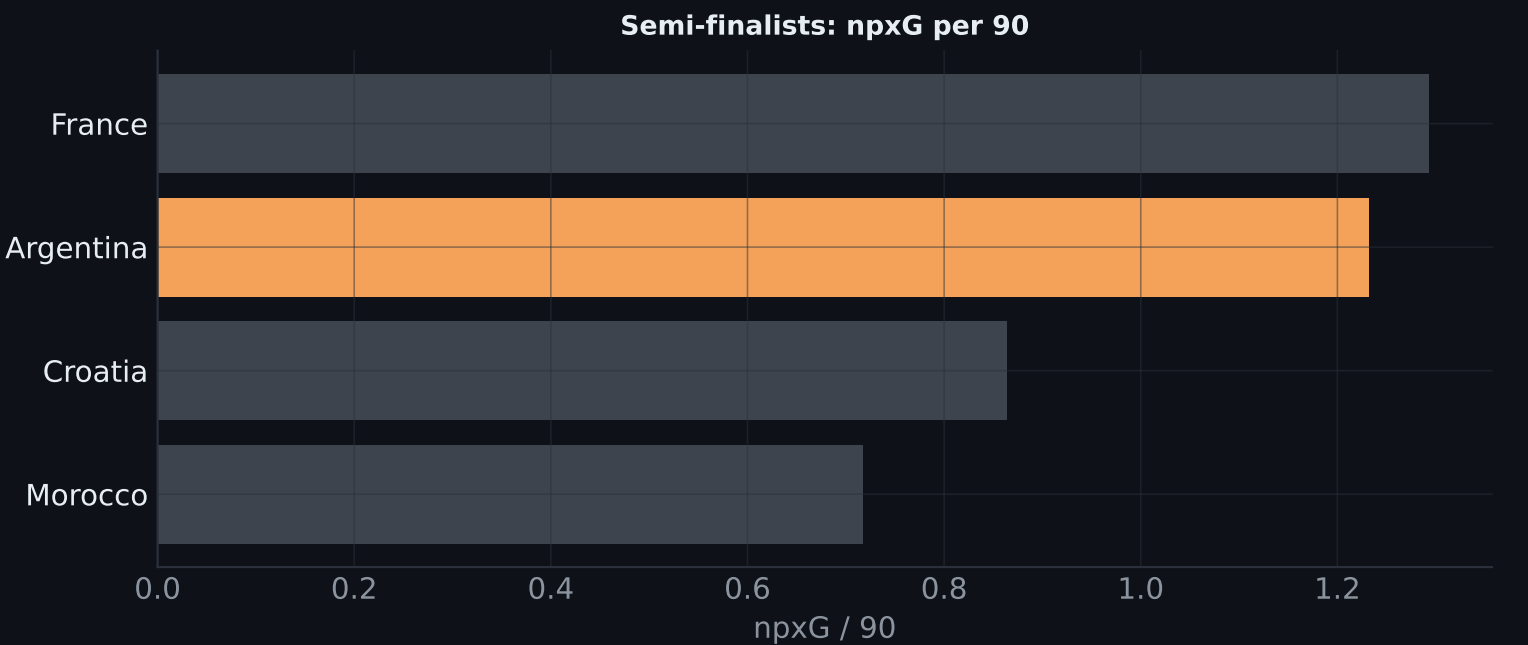

Player Analysis + Aggregate Shotmap

Aggregate shotmap: 101 shots, xG 13.94, npxG 10.02

Benchmark - WC 2022 (Full field + Semi-finalists)

team	npxG_per90	npg_minus_npxG	rank_npxG_per90	rank_npg_minus_npxG
Germany	2.288	-2.448	1.0	30.0
Brazil	1.725	-2.719	2.0	32.0
Switzerland	1.424	-1.091	3.0	23.0
England	1.33	4.831	4.0	2.0
France	1.293	3.745	5.0	5.0
Argentina	1.232	0.981	6.0	11.0
Belgium	1.175	-2.694	7.0	31.0
Portugal	1.06	4.254	8.0	3.0
Canada	0.997	-2.145	9.0	28.0
Uruguay	0.991	-1.271	10.0	25.0
Denmark	0.991	-2.192	11.0	29.0
Serbia	0.949	1.91	12.0	7.0

Critical Interpretation

- 32-team evidence: Argentina $\text{npxG}/90$ rank = 6/32 (value 1.23), tournament median = 0.92, IQR [0.76, 1.01].
- Semi-finalist-only comparison is selection-biased toward elite teams; it is contextual, not global proof.
- Finishing signal: $\text{NPG} - \text{npxG} = +0.98$, z-score = 0.31.
This is close to average finishing noise, not clearly different from mean finishing.
- NPG for all teams is computed from non-penalty shot goals, so own goals are excluded consistently.
- Mexico outlier: xGF 0.33 with 2-0 scoreline.
- Quarter-final Netherlands (1.94-0.57) and Final France (2.76-2.27) are high-variance states.
- Synthesis: strong attacking base + variance, without evidence of an extreme unsustainable finishing spike.
